

PROCESS CONSULTING (SET UP)

Together we optimize your processes during machine setup

Why Process Consulting?

The goal of the Lean Management approach is to optimally coordinate all value-added activities and reduce unnecessary cost factors. During our Consulting you will learn the basics of process optimization as well as methods for reducing setup times and the individual components. Together with the participants W&H experts will document the current set-up procedures on your machine and analyze possible improvement potential for your processes. The optimized processes and structures are implemented directly at the machine to achieve an immediate increase in performance. Together developed standards ensure the sustainable success of the measures taken. We document all results for you and control the implementation of the defined measures in a follow-up audit.

Training content

- ✓ Basics of process optimization (Lean Management)
- ✓ Basics of the setup
- ✓ Documentation and analysis of setup processes at the machine
- ✓ Identification of open potentials
