

VISION

Increased production efficiency and print quality through fully integrated print monitoring and print inspection

Why VISION?

• Intuitive operation

The common control system of press and inspection system generates an intuitive handling and makes job setups faster and more reliable.

• Intelligent inspection and analysis

The direct flow of information between press functions and inspection data are used for in depth root cause analysis. Such as the identification of issues on the plate, CI or anilox roller as reasons for print defects.

• Focused on customer needs

A large number of VISION modules is available today, e.g. BARCODE CHECK, RGB-LAB CHECK, PDF CHECK and HAZE CHECK. We continuously develop valuable features based on your requirements.

• W&H – known for best service

Our worldwide local service teams guarantee a short time response and qualified support for all presses and inspection systems either onsite or through our 24/7 service hotline.

VISION modules are available on all W&H flexo & rotogravure presses.

Your advantages

- ✓ Integrated and intuitive operation of web viewing and inspection systems
- ✓ Intelligent combination of press- and inspection data for advanced defect analysis
- ✓ Wide range of inspection modules
- ✓ Worldwide service for printing press and inspection system through W&H specialists
