

# INSPECTION PLAN

Regular machine audits with detailed analyses for technical improvements

## Why Inspection Plan?

To maintain the performance of your machines at a high level in the long term, professional maintenance is required. W&H Lifecycle Services have been developed for this purpose.

With the W&H Inspection Plan, you benefit from regular machine inspections by experienced W&H technicians for a detailed analysis and evaluation of the technical condition of your W&H machine. This not only provides you with transparency about possible weak points and technical deviations from the target state, but also with recommendations for action and improvement measures.

In addition to regular machine inspections, the W&H Inspection Plan also provides comprehensive information about the current spare parts status of your machine.

In order to ensure an optimum spare parts supply and reliable production with a view to the next two years, a machine-specific spare parts proposal list is created for local stocking at the production site.

## Your advantages

- ✓ Yearly machine inspections for full transparency about the technical machine condition
- ✓ Early detection of damage and problems
- ✓ Reduction of unplanned downtimes
- ✓ Recommendation for action and improvements
- ✓ Recommendation for required spare parts and suitable upgrades and retrofits

As part of the W&H Inspection Plan, the machine is also checked for possible modernizations. Our upgrades and retrofits bring your machine up to the latest state of the art and ensure high machine availability and productivity in the long term.

# INSPECTION PLAN

Regular machine audits with detailed analyses for technical improvements

## THE W&H INSPECTION PLAN INCLUDES THE FOLLOWING SERVICES

### MACHINE INSPECTION

With annual machine inspections, we ensure a detailed assessment of the technical machine condition. In this way, problems are detected at an early stage before they lead to major damage. All results are documented in a report. In this way, you not only receive transparency about the actual machine condition, but also recommendations for possible improvements.

- Analysis and assessment of machine condition according to W&H machine inspection checklists
- Determination of critical target/actual deviations
- Evaluation of required spare parts
- Execution of minor repairs and adjustments as far as possible within the allotted time
- Documentation of inspection results including recommendations for improvements

### SPARE PARTS RECOMMENDATION

The W&H Inspection Plan also provides machine-specific spare parts proposal lists for local stocking on customer site. The lists are designed for a period of two years to ensure optimal spare parts supply and reliable production.

- Machine-specific recommendation for local spare parts stocking for the next two years to ensure stable production
- Classification of parts in spare parts, wear parts, risk parts and norm parts

### UPGRADE AND RETROFIT RECOMMENDATION

Within the W&H Inspection Plan, we provide you with information about obsolete components and available upgrades to maintain machine functions in the long term. Beyond that, we also inform you about possible retrofits to expand the functional scope of the machine.

- Information about obsolete parts
- Recommendation for suitable upgrades to maintain existing machine functions
- Suggestion for possible retrofit solutions to expand machine functionalities or to increase performance
