

DIE HEAD SERVICE AT THE CUSTOMER

The professional all-round service for a quick restart of production

Why Die Head Service at your premises?

The die head is the central component of your extrusion machine. The condition of the die head has a significant impact on the quality and productivity of your film extrusion process. Regular maintenance of the die head is essential to ensure the production of high-quality products.

Our service provides cleaning and maintenance of the heart of your extrusion machine. To facilitate a swift resumption of production with minimal interruption, we provide our Die Head Service on-site at your facility.

A W&H specialist will work with your team at your production site to perform this service. From disassembly of machine modules, inspection and cleaning of individual components, replacement of spare and wear parts to reassembly, commissioning and controlled start-up, we offer a comprehensive service tailored to the heart of your extrusion line.

The inspection and cleaning process includes not only the die head but also the air ring and multi-level bubble cooling.

Your advantages

- ✓ Professional die head cleaning with special tools
- ✓ Comprehensive service from dismantling to recommissioning with a guarantee of density
- ✓ Complete inspection and cleaning of both, die head and plastification units including measurement of the screws
- ✓ Reduced downtime by ordering our express service to get back to production quickly
- ✓ Increased productivity and secured quality

DIE HEAD SERVICE AT THE CUSTOMER

We keep the heart of your extrusion machine working with our entirely die head service

Additionally, we conduct inspections and cleaning of the plastification units, comprising the vacuum conveying system, gravimetric metering system, and extruder. In addition, the screws are measured during this process to determine their condition and wear, thus ensuring optimum production in the long term.

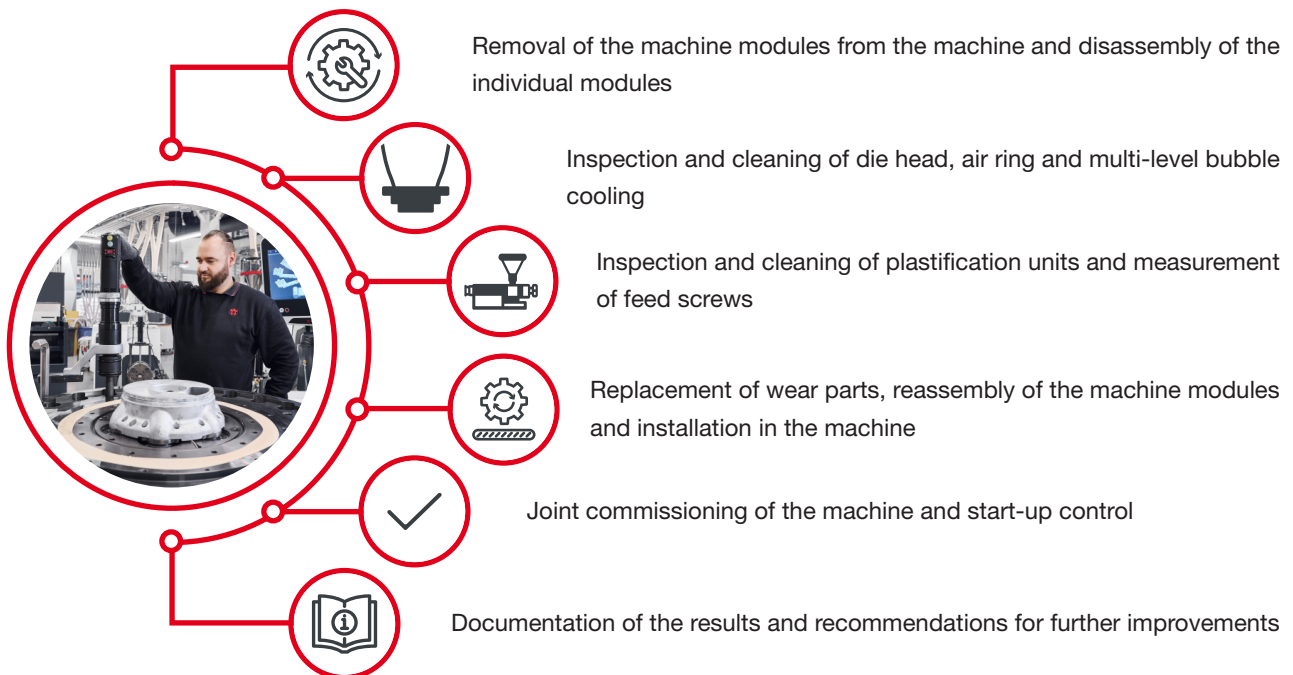

Furthermore, comprehensive documentation and recommendations for action will be provided to you.

To shorten up the processing time, we offer an express service in addition to the standard service, where a W&H expert carries out the work with three to four of our own

employees. In this case, two W&H experts will come to your production facility to perform the service with six of your employees. We will also deliver a rental toolbox to your facility, prepared for die head service and other tasks. The express option can reduce cleaning time by up to 40%.

Should you prefer to clean the die head in a pyrolysis oven, or if you need your die head overhauled, our experts at the W&H headquarters in Germany will be happy to assist.

Steps of the W&H Die Head Service at your production site

Would you like to speed up the Die Head service? Use our express service with additional man power*.

*Rental Tool Box is required
