WINDMÖLLER & HÖLSCHER

Why RUBY Gain?

Continuously analyze production parameters to ensure consistently high film quality
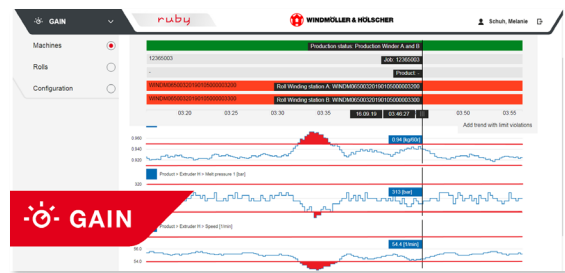

RUBY Gain supports your ongoing production on every machine and lets you continuously learn from past productions. Real-time triggered machine alerts avoid scrap production, increase film quality and improve production efficiency.

RUBY Gain analyzes your film structures to detect different products. For each of your products, it automatically suggests parameter limits for all relevant production parameters based on
• historical production data
• W&H process know-how
• proven data analytics

Continuously monitoring these parameter limits, RUBY Gain always hints the right points to look at – for operators at the shop floor as well as for process engineers and quality management in the office.

For all W&H extrusion lines.

Your advantages

✓ Continuously supervise your live production processes to ensure production conforms to specifications

✓ Configure RUBY Gain specifically for your production by stepping through the guided setup process

✓ Define set points and process limits for your products automatically based on past production data

✓ Use smart import and recognition features to recognize your products automatically
