

INSPECTION

With us you have your machine condition in view

Why inspection by W&H?

The condition of your machines has a significant impact on the productivity and quality of your production. To avoid problems and minimize downtimes we support you with professional maintenance for your machines.

We recommend carrying out a regular inspection in addition to the routine maintenance. With machine inspections, we ensure a detailed assessment of the technical machine condition. In this way, problems are detected at an early stage before they lead to major damage.

All results are documented in a report. In this way, you not only receive transparency about the actual machine condition, but also recommendations for possible improvements and required spare parts.

Your advantages

- ✓ In-depth analysis and assessment of technical machine condition through W&H experts
- ✓ Determination of critical target / actual deviations
- ✓ Execution of minor repairs and adjustments as far as possible within the allotted time
- ✓ Detailed documentation of inspection results including recommendations for improvements
- ✓ Evaluation of required spare parts
- ✓ Increased machine availability and productivity
