

# SOFTWARE MODULES

Increase your machine performance with optional software modules by W&H

Benefit from the possibility to increase production quality, machine availability or efficiency of your extrusion line or printing press even more easily. Direct online access to your machine allows you to add new features or connect to RUBY, the W&H IoT system, without requiring hardware or an on-site visit.

Using a secure internet connection, W&H specialists can connect directly to your machine and modify the software configuration. This enables the installation and commissioning of new features, e.g. RUBY, BARCODE CHECK, RGB-LAB CHECK, PROFILE BOOSTER and many more. After successful commissioning, W&H provides your machine operators with helpful information to efficiently use the newly installed functions.

## Your advantages

- ✓ Latest software modules for your machine – no additional hardware needed
- ✓ Easy installation via remote access to the machine
- ✓ No need for a technician deployment on-site – no extra costs
- ✓ Choose from different modules to increase your production quality, machine availability and efficiency

For more information on your individual possibilities, please contact your **Service Sales Managers**.
