

# FEEDBLOCK AND DIE SERVICE

Professional cleaning and inspection for consistent film quality

## Why Feedblock and Die Service?

The feedblock and die are the central components of your cast film line and have a significant impact on the quality and productivity of the machine. Regular maintenance of these modules is essential for the continuous production of high-quality films.

Our service includes mechanical cleaning and inspection of the melt contact components, especially the feedblock and the die. A W&H specialist works with your team on site to enable a quick resumption of production. The following tasks are carried out together: disassembly of the machine modules, cleaning and inspection of the components, reassembly, and replacement of spare and wear parts.

## Your advantages

- ✓ Professional, mechanical cleaning and inspection of melt contact components
- ✓ Comprehensive service from dismantling to recommissioning
- ✓ Optional: Cleaning and inspection of extruders as well as measurement of screws
- ✓ Increased productivity and secured quality
- ✓ Detailed documentation with recommendations for action

Our comprehensive service for the heart of your cast film line also includes joint recommissioning.

Upon request, we also carry out cleaning and inspection of the extruders. Additionally, there is the possibility of screw measurement to detect wear at an early stage.
