

PRODUCTION SUPPORT FOR CONVERTING MACHINES

Expert support for daily production with your converting machine

Why a W&H Production Support?

During a production support you receive professional support during production with your W&H converting machine directly at your premises. Your employees will be supported by an experienced W&H trainer during the entire production process and are professionally supported in all activities that arise.

We optimize your production processes and show your employees the systematic nature of the processes on the converting machine. In this way, they learn to understand the process engineering sequences at the individual stations and to operate the machine fully. In addition, your employees are put in a position to recognize malfunctions in the production process and to remedy them independently.

At the end of the production support, the participants will have acquired the necessary knowledge required as operator responsible for the machine.

Training content

- ✓ Preparation and start of production
- ✓ Optimization of production processes and productivity
- ✓ Assessment and optimization of product quality
- ✓ Identification and elimination of errors
- ✓ Management and change of production orders
- ✓ Organization of the working environment

W&H TRAINING

In a W&H Training, you will receive practice-oriented training based on defined learning concepts and with clear learning objectives. You benefit from qualified trainers with many years of practical experience. Professional product and application knowledge go hand in hand in our training courses.
