

ROTALINER[™]

Poly liner system for your tuber

Why ROTALINER[™]?

Many products for the chemical, pharmaceutical and food markets need special packaging to meet the stringent standards with respect to hygiene and sift-proofness. These needs can only be met with special sacks. For many years, paper and plastic sacks with sealed liners have been successfully used for this purpose. Both valve sacks and open mouth sacks are typical sack designs. The ROTALINER[™] allows these special products to be produced in an economically efficient manner and with excellent quality.

The ROTALINER[™] offers an outstanding flexibility with regards to sack dimensions. A special feature which makes the machine an attractive piece of equipment while at the same time providing the basis for new dimensions in terms of commercially efficient liner sack production, is the high output of up to 220 pcs/min. The innovative design of the sealing bars and the intelligent control of web tension, sealing parameters and drives guarantee perfect tubes.

Your advantages

- ✓ High production speeds up to 220 pcs/min.
- ✓ Flexibility in sack sizes
- ✓ Highest quality for sophisticated products

Technical Data

Liner width	30 – 70 cm
Liner length	50 – 160 cm
Film thickness	20 – 150 µm
Liner unit speed	max. 220 pcs/min.
